How to clean & care for your Styletto® painting tools.

Styletto® Paint Caddie:

Your Styletto® Paint Caddie is an investment. You can ensure its going to last by cleaning it thoroughly and properly at the end of each painting session.

1- Remove all excess paint from the plastic paint tray. Large amounts of leftover paints should not be poured down the sewer drain, sink or toilet. Check your local or city facilities for safe disposal.

2- Place the plastic paint tray in the sink. Turn on the faucet and rinse the Paint Caddie with warm water. Allow the water to run until it runs clear of paint color.

3- Add dish soap to the water if there is still paint remaining on the plastic after you rinse it. Use a plastic scrubber to help clean off any dried up paint.

4- Another option for cleaning is to allow the paint to completely dry on the plastic paint tray. You will need to wait before using the plastic paint tray again. If you allow the paint to sit until it hardens, most acrylic and latex paints can simply be peeled off of the surface of the tray, rendering it ready for use again.
